

Alzheimer's disease caregiver screening tool

This screening tool is designed to help us determine the services and information that your pharmacy can provide to you as a caregiver.

1. Over the last 6 to 12 months, have you found that the condition of the person you are caring for has become:

- Much worse
- A bit worse
- About the same
- Improved

2. Which of the following would help you provide care to this person? (check all that apply)

- More information about the disease and what I should expect
- More information about the drugs that are used to treat the disease
- Tools that can help me improve the care I provide
- More information on how other families care for people with this condition
- Resources in my community that can help provide care

3. If the pharmacist could sit down with you today, which of the following would be of the most benefit?

- More information about Alzheimer's disease
- More information on the different medications and how to make them easier to take
- More information about services that can support the person with Alzheimer's disease

4. Do you feel that you have the support and help you need over the next year, if the person you care for stays the same or worsens?

- Yes
- No

5. What are your biggest concerns about providing care?

Please return this questionnaire to the pharmacy counter. We will review it and suggest some resources, products and services that can help make your care journey easier.

At Teva, we are committed to working with our pharmacy partners to help make the care journey easier for you.
